DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 28 through 36 and 63, drawn to a composite material.
Group II, claims 37 through 62, drawn to a method of making a composite material.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Group II claims 37 through 49 and 61 claim the same technical feature as claim 28. However the material of claim 28 does not exhibit "special technical features" because it does not make a contribution over the prior art. Takemura et al. (JP 09-000947) teaches, in paragraph 15 (see machine translation, a formal translation will be provided with the next office action), a photocatalyst deposited on optical fibers by vapor deposition. In one embodiment the photocatalyst is titanium dioxide, a titanium oxide.

Group II claims 50 through 60 and 62 all claim the same technical feature as claim 50. However the process of claim 50 does not exhibit "special technical features"

because it does not make a contribution over the prior art. Baba et al. (JP 2000-072575) teaches, in paragraph 27 (see machine translation, a formal translation will be provided with the next office action), heating a base tile to 150 to 250°C, forming a titanium dioxide film on the tile by vapor deposition and then heating the tile to 500 to 900°C to crystallize the titanium dioxide. In paragraph 24, the material for the vapor deposition is taught to include titanium tetrachloride and water vapor.

It is noted that the International Preliminary Examination Report for PCT/JP02/07598, which is the parent of the instant case, cited both of these documents as reading on the claims of that case.

A telephone call was made to Patricia Olosky on February 15, 2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of

record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
